AXONOMETRY SET OF 2 ROSE TRAYS BY ELISA GIOVANNONI

\$615

DESCRIPTION

Part of the Axonometry Collection, this set of two trays is defined by a bold and sophisticated profile. Both pieces seemingly create the planar image of three-dimensional rectangles with mesmerizing effects, either if used as display surfaces for collectibles on a coffee table or console, or as elegant trays to serve food and drinks in a modern living room or dining room. The finish of these brass pieces in rose gold infuses a charming accent with elegant gleams when catching the surrounding light.
