DNA 4-SEAT BENCH

\$3,310

DESCRIPTION

As suggested by its name, the distinctive shape of this contemporary bench is inspired by the DNA molecular shape. Crafted of a single section of curved multilayered beechwood with oak wood finish, the dynamic helicoidal silhouette delineates four separate seats connected by laser-cut steel links. This appealing piece of furniture, suitable for both residential and commercial interiors, is available also in a special-edition version with padded and upholstered exterior in leather or fabric.
