GEAR VASE IN SILVER LEAF

\$250

DESCRIPTION

This vase bears a unique shape mimicking the look of stacked mechanical gears. The process of making this exquisite piece involves using an extrusion process and polyurethane to create the structure of the piece which is then given a stucco textured surface, and finally hand gilded using pure silver leaf. The burnished look is achieved using bitumen wax before it is finally coated in an epoxy resin, that gives the piece a subtle shine. This exquisite object can adorn a living room or a dining table and can be placed among other vases from the collection.
